Itineraries, Route Brief, access codes, supplies

7

Team Management

Roles, permissions, assignments, communication

8

Settings & Customization

Feature flags, org settings, notifications

9

Tips, Shortcuts & FAQs

Power-user tips, keyboard shortcuts, common questions

NOTE

All data in the demo environment is fictional. Nothing you do here affects real clients or real billing. The demo can be fully reset at any time from Super Admin !' Demo tab !' Reset Demo Data.

Getting Started

Logging in and finding your way around

How to Log In

1 Open the staff login page

Navigate to `/staff/login` in your browser. You'll see a clean login form with an email and password field.

2 Enter the demo credentials

Email: `demo@hubifyhomesonline.com` · Password: `Demo2026!`

3 Click Sign In

You're taken directly to the Dashboard. No two-factor setup or onboarding required.

The Navigation Bar

The left sidebar (or top nav on smaller screens) contains every major feature. Here's what each item does:

Nav Item	What It Does	Who Can See It
Dashboard	Your daily command center — urgent tasks, stats, team chat, activity feed	All roles
Properties	Full list of all 10 demo properties with search, filter, and sort	All roles
Tasks	All tasks across every property — filterable by status, priority, and assignee	All roles
Calendar	Event view of all scheduled visits, vendor appointments, and team events	All roles
Contacts	Owners, tenants, vendors, and emergency contacts for the demo portfolio	All roles
Invoices	Billing management — create, send, track, and collect payment on invoices	Admin, Supervisor
Dispatch	Daily itinerary builder and Route Brief tool for field staff	Admin, Supervisor
Team	Staff roster, roles, assignments, and invite management	Admin, Supervisor
Admin	Settings, feature flags, billing config, email templates, forms	Admin only

The Dashboard at a Glance

The Dashboard is the first thing you see after login. It's built from widgets — each one can be toggled on or off and reordered by drag-and-drop. Here's what the default layout includes:

 Urgent Tasks	Lists all tasks with Urgent priority that are still Pending or In Progress. Clicking any task opens it in a full detail view. This widget is the fastest way to find "what needs attention today."
 Stats Overview	Four headline numbers: total active properties (10 in the demo), urgent tasks, overdue tasks, and active team members. These update live as you work.
 Team Chat	A running message thread shared across all staff. Pre-seeded with demo messages. Type a message and press Enter to post — it appears immediately for all logged-in users.
 Recent Activity	A timestamped log of everything that has happened in the platform — tasks created, statuses changed, contacts added, invoices sent. Filterable by type.
 Calendar	A compact event preview showing the next 7 days. Click any event to open the full calendar at that date.

TIP

To customize which widgets appear and in what order, click the gear icon (&™) in the top-right corner of the Dashboard. Changes are saved per user — each person has their own layout.

User Menu

Click your name or avatar in the top-right corner to access:

- Your profile — name, email, profile photo
- Notification preferences — which events trigger alerts
- Calendar settings and iCal subscription URL
- Log out

Properties

The 10 demo properties and how to navigate them

The Properties List

Navigate to Properties in the left nav. You'll see all 10 demo properties displayed as cards or in a table — toggle between views using the icons at the top right of the list.

Each property shows its name, type, city, status (occupied / vacant), and a count of open tasks at a glance. Properties are color-coded by status and urgency.

Filtering and Searching

- Use the search bar to find a property by name, address, or city
- Click the Filter button to narrow by property type (single family, condo, estate, rental)
- Click a column header in table view to sort by name, status, or task count
- Active filters are shown as removable chips — click × to clear individual filters

TIP

Try filtering by "urgent tasks > 0" to instantly see which properties need attention. In the demo, Pelican Point, Gulfstream Manor, and The Sandpiper all have urgent open tasks.

Property Detail — Tabs Overview

Click any property name to open its detail page. The property detail view has multiple tabs:

Tab	What You'll Find
Overview	Address, description, property type, assigned manager, primary contact, and current status. Edit the property details here.
Tasks	All tasks for this property — open, in progress, and completed. Create new tasks directly from this tab.
Rooms	Room inventory with supply tracking. Add rooms (kitchen, bedrooms, pool area, etc.) and track supplies needing replacement.
Access Control	Door codes, gate codes, alarm codes, Wi-Fi passwords, and any other access credentials stored securely for this property.
Inspections	Inspection history, active checklists, and scheduled recurring inspections. Each inspection has pass/fail results per checklist item.
Vendors	Vendors linked to this property — HVAC, plumber, pool service, electrician, etc. Click a vendor to see their contact info.
Documents	Files uploaded for this property — lease agreements, warranties, insurance docs, HOA rules. Upload and download from here.

Notes	Internal staff notes. Not visible to clients. Timestamped and attributed to the staff member who wrote them.
Calendar	Events that include this property as a location — filtered calendar view just for this address.
Portal Settings	Configure how this property appears in the client portal — visibility, branding overrides, welcome message.

The 10 Demo Properties — Scenarios

Each demo property is pre-loaded with a realistic scenario. Here's a quick reference:

Property	Location	Type	Scenario
1 • Beachside Breeze	Naples, FL	Home Watch	HVAC fault before owner arrival — urgent task, vendor dispatched. Shows emergency home watch workflow.
2 • Sunset Key Villa	Naples, FL	Luxury Estate	Pool heater + smart-home offline — two open repairs. Shows luxury property management with vendor coordination.
3 • Coconut Harbor Retreat	Fort Myers, FL	Seasonal	Hurricane prep checklist active. Shows recurring seasonal workflow and deadline tracking.
4 • Pelican Point Cottage	Naples, FL	Emergency	Active water leak, critical alert, plumber on-site today. Shows emergency response and critical task escalation.
5 • Royal Palm Estate	Palm Beach, FL	VIP Luxury	Owner event prep — 6 vendors coordinated, estate inspection completed. Shows complex event management.
6 • Marina Bay Condo	Ft. Lauderdale	Rental	Guest turnover in progress — smart lock reset overdue, new guests arriving tomorrow.
7 • Gulfstream Manor	Bonita Springs	High Maintenance	Irrigation repair 3 days overdue — HOA violation risk within 7 days. Shows urgency escalation.
8 • The Sandpiper	Sarasota, FL	Seasonal Arrival	Owner arriving 2 days early — rush prep tasks created, same-day cleaning dispatched.
9 • Lighthouse Point	Key West, FL	Storm Damage	Roof leak after storm — insurance documentation tasks, roofer on-site. Shows damage response workflow.
10 • Oceanfront Oasis	Delray Beach, FL	Stable Premium	All tasks current, 4-year client, weekly + monthly recurring schedule. The "healthy account" baseline.

Editing a Property

- 1 Open the property detail page**
Click the property name from the list.
- 2 Click "Edit" in the Overview tab**
A form opens with all editable fields — name, address, type, status, manager, primary contact, and description.
- 3 Make your changes and click Save**
Changes save immediately. The updated values appear across the platform everywhere this property is referenced.

NOTE Changing a property's status to "Vacant" will flag it differently on the dashboard and in the dispatch view. In the demo, The Sandpiper is set to Vacant because it's a seasonal property.

Access Control — Storing Codes Safely

Every property can store an unlimited number of access credentials. Navigate to a property !' Access Control tab to see them.

- Codes are stored encrypted in the database — never in plain text
- Values are masked (shown as %i%i%i%i) by default — click the eye icon to reveal
- Each code has a category (door, gate, alarm, pool, Wi-Fi) and a description label
- The Route Brief in Dispatch pulls these codes for the day's itinerary — staff see only the codes for properties they're visiting that day

TIP You can reveal all codes at once by clicking "Show All" in the Access Control tab header. This action is logged in the activity feed for audit purposes.

Tasks & Inspections

Creating, managing, and completing work across your portfolio

Understanding Task Statuses

Pending

Task created and assigned but not yet started. Due date is set.

In Progress

Work has started. Field staff have begun the job on-site.

Completed

Work is done. A completion timestamp is recorded automatically.

Cancelled

Task was cancelled and will not be completed.

Overdue

Status is Pending or In Progress but the due date has passed.

Task Priority Levels

Priority	What It Means	Dashboard Treatment
Urgent	Must be handled today — active damage, client arrival, vendor on-site	Appears in the Urgent Tasks widget; shown in red
High	Important but not emergency — address within 24–48 hours	Shown with orange priority indicator in task list
Normal	Standard scheduled work — routine inspections, maintenance	Default priority for new tasks
Low	Nice-to-do when time permits — cosmetic, administrative	Shown in muted styling, sorted to bottom of list

Creating a Task

1 Press T anywhere — or click "+ New Task"

The quick-create panel opens as a modal over whatever page you're on.

2 Enter a title

Keep it clear and actionable — "Fix pool heater motor — Sunset Key" is better than "Pool issue".

3 Select the property

Type to search. The task will be linked to this property and appear in its Tasks tab.

4 Set priority, category, and due date

Category options: maintenance, inspection, cleaning, repair, administrative, other.

5 Assign a team member

The assigned person gets an in-app notification and sees the task in their personal task view.

6 Add a description (optional but recommended)

Include vendor contacts, specific instructions, or safety notes. Field staff see this on their phones.

7 Click Create Task

The task appears immediately in the property's task list and the main Tasks view.

TIP

Use the Description field generously. A note like "Use the back gate code — front lockbox was replaced last week, code is now 7821" saves a phone call from the field.

Editing and Completing Tasks

- Click any task to open the full detail view
- Change status by clicking the status dropdown — select In Progress when work begins, Completed when done
- Completion timestamp is recorded automatically with the current date and time
- Attach photos from the task detail view — before/after photos are categorized and stored with the task
- Add notes in the task comments — visible to supervisors and the assigned staff member
- Reassign a task by changing the Assigned To field — the new assignee gets a notification

Using Task Templates

Templates let you create reusable task scaffolds with pre-filled checklists, priorities, and time estimates. The demo has templates for the most common property management scenarios.

1 Click "+ New Task" !' "Use Template"

A template picker opens with the available templates.

2 Select a template

Demo templates include: Hurricane Prep, Move-In / Move-Out Turnover, Weekly Home Watch, Monthly Inspection, Pool Service, and HVAC Service.

3 Review and adjust

The template pre-fills the title, category, priority, and checklist items. Change the property, assignee, and due date before saving.

4 Save the task

A fully formed task with a checklist is created in seconds.

Recurring Tasks

Recurring tasks auto-generate the next instance when the current one is completed. Two recurring tasks are active in the demo:

- Monthly Property Check — The Sandpiper: fires on the 20th of each month
- Weekly Home Watch — Oceanfront Oasis: fires every Monday (recurring from last week's completed instance)

To create a recurring task: check "Is Recurring" in the task form, then set the recurrence rule (weekly, monthly, custom RRULE). The frequency and schedule appear on the task detail page.

TIP

Recurring tasks show a !» icon in the task list. Completing a recurring task does not delete it — it schedules the next instance automatically, so the work never falls through the cracks.

Inspections and Checklists

Inspections are tasks with attached checklists. Each checklist item can be marked Pass, Fail, or N/A, with an optional note and photo per item.

1 Open a property !' Inspections tab

The demo has 3 completed inspections with full checklists across different properties.

2 Open any inspection

Each item shows a result (pass/fail), a staff note where relevant, and any attached photos.

3 Create a new inspection task

Use the "Inspection" category when creating a task, then add checklist items via the + Checklist Item button.

4 Mark items as you go

Field staff mark each item on their phone in real time. Results are visible to supervisors immediately.

5 Complete the inspection

Mark the task Completed. The inspection is saved to history with a timestamp and the completing staff member's name.

TIP

Failed checklist items automatically create a note prompting a follow-up task. Supervisors can click "Create follow-up" directly from the failed item to generate a new repair or maintenance task.

Recurring Inspection Schedules

Beyond individual recurring tasks, Hubify supports inspection schedule objects that define a rolling program of inspections for each property. Navigate to a property !' Inspections tab !' Schedules to see them.

- Oceanfront Oasis: weekly, monthly, and quarterly inspection schedules all active
- Gulfstream Manor: monthly + quarterly schedules (monthly flagged a failed irrigation item)
- Royal Palm Estate: monthly schedule linked to the pre-event inspection checklist

Calendar

Scheduling, event management, conflict detection, and iCal sync

Navigating the Calendar

- Switch between Day, Week, and Month views using the tabs at the top of the Calendar page
- Click the forward/back arrows to move between time periods
- Click any event to see its details — property link, attendees, description, and location
- Click any empty time slot to create a new event at that date and time

The 10 Pre-Seeded Demo Events

Event	When	Property	Notes
Weekly Team Standup	Recurring Mon 9am	None (team)	All 4 staff — shows recurring team events
CoolBreeze HVAC service call	Tomorrow 10am	Beachside Breeze	Linked to the open HVAC repair task
SmartHome Tech system reset	Tomorrow 1pm	Sunset Key Villa	Linked to the smart-home offline task
FastFlow Plumbing leak repair	Today 8am	Pelican Point	Intentional conflict with another same-staff event
Owner arrival	2 days out 2pm	The Sandpiper	Rush prep event — triggers urgency in task list
Hurricane prep deadline	Today 6am	Coconut Harbor	Hard deadline — shows deadline events
StormGuard roofing assessment	Today 9am	Lighthouse Point	Same-day emergency vendor appointment
Owner event — Royal Palm	6 days out 5pm	Royal Palm Estate	VIP event — supervisor is organizer
Pre-event walkthrough	5 days out 11am	Royal Palm Estate	Inspection day before the owner event
Quarterly portfolio review	2 weeks out 3pm	None (office)	Management meeting — all staff invited

Conflict Detection

Hubify checks for scheduling conflicts automatically. A conflict occurs when the same staff member is assigned to two overlapping events. In the demo:

- Demo Staff 1 is assigned to both the FastFlow Plumbing visit (today 8–11am) and another event that overlaps
- The conflict appears as a red warning badge on both events
- Supervisors see a conflict count badge in the Calendar nav item when conflicts exist

HOW IT WORKS

Conflict detection runs server-side whenever a new event is created or an existing event is modified. You don't need to manually check — the system flags it immediately.

Creating an Event

- 1 Click "+ New Event" or click any empty calendar slot**
The event creation form opens.
- 2 Set the title, date, start time, and end time**
Events can be all-day (toggle the "All Day" switch) or time-specific.
- 3 Link a property (optional)**
Linking a property connects the event to the property's calendar tab and to any dispatch itinerary for that day.
- 4 Add attendees**
Select staff members. They'll see this event in their personal calendar view. A conflict check runs automatically.
- 5 Set recurrence (optional)**
Choose weekly, monthly, or custom for recurring events like weekly standups or monthly inspections.
- 6 Save**
The event appears immediately for all attendees.

iCal Sync — Export to Google Calendar or Outlook

Hubify generates a personal iCal feed URL for each user. Subscribing to it imports all your Hubify events into your external calendar app — and keeps them in sync automatically.

- 1 Open User Menu !' Calendar Settings**
You'll see your personal iCal subscription URL.
- 2 Copy the URL**
It looks like: `/api/calendar/ical?token=...`
- 3 In Google Calendar: click "Other calendars" !' "From URL"**
Paste the URL and click Add Calendar. Google will refresh it every few hours.
- 4 In Outlook: click "Add calendar" !' "From internet"**
Paste the URL and subscribe. The calendar appears in your sidebar.

NOTE

iCal is one-way: Hubify events appear in your external calendar, but changes made in Google Calendar do NOT sync back to Hubify. All event management happens inside Hubify.

Invoices & Billing

Managing invoices, collecting payments, and batch billing

Invoice Statuses — What Each One Means

Status	What It Means	Client Can See It?	Next Action
Draft	Invoice is being prepared. Not finalized yet.	No	Edit line items, then change to Sent when ready.
Open	Invoice has been sent to the client.	Yes	Wait for payment, or send a payment reminder.
Overdue	Past the due date and still unpaid.	Yes	Send a reminder or contact the client directly.
Paid	Payment collected. Receipt URL generated (if via Stripe).	Yes	No further action needed.
Void	Invoice cancelled. A credit note may be issued.	No	Create a replacement invoice if needed.

The 7 Demo Invoices

Invoice #	Client	Amount	Status	Property
DEMO-2026-001	Main Client	\$385	Paid	Beachside Breeze — April home watch + inspections
DEMO-2026-002	Main Client	\$520	Open	Beachside Breeze — May service + HVAC coordination
DEMO-2026-003	VIP Client	\$1,850	Paid	Royal Palm Estate — April estate management + event prep
DEMO-2026-004	VIP Client	\$2,460	Open	Royal Palm Estate — May estate + owner event (6 vendors)
DEMO-2026-005	Rental Client	\$285	Paid	Marina Bay Condo — April turnover + inspection
DEMO-2026-006	Rental Client	\$310	Open	Marina Bay Condo — May turnover + guest prep
DEMO-2026-CONSOL	Main Client	\$985	Draft (Batch)	All 3 billing clients — May 2026 consolidated preview

The Consolidated Batch Invoice

The consolidated invoice (DEMO-2026-CONSOL) is a single invoice covering all three billing clients for the same period. This is one of Hubify's most-used billing features — it lets portfolio managers send one invoice per billing cycle instead of managing invoices per-property.

- 1 Navigate to Invoices !' find DEMO-2026-CONSOL**
It's in Draft status — the client can't see it yet.
- 2 Open the invoice**
Scroll through the line items — each client and property is itemized. Total is \$985 across 3 accounts.
- 3 Preview the PDF**
Click the PDF icon to see the formatted invoice the client would receive.
- 4 Change status to Sent**
Click the status dropdown !' Sent. The invoice is now visible in the client portal immediately.
- 5 Watch the portal update**
Open the client portal in a separate tab — the invoice appears in the client's Invoices tab.

Stripe Integration — Online Payment Collection

When Stripe is connected, clients can pay invoices online directly from their portal. Hubify tracks payments via webhook — the invoice status updates automatically to Paid when payment clears.

- Open DEMO-2026-001 (paid) to see a completed Stripe payment — card brand (Visa), last 4 digits, payment date, and receipt URL
- Paid invoices show a "View Receipt" link that opens the Stripe-hosted receipt
- Payment method is stored securely in Stripe — never in Hubify's database
- For demo purposes, no live card charges can be made; the Stripe data is pre-seeded

KEY RULE

Draft invoices are permanently hidden from the client portal — regardless of any setting or permission. Only Sent and Paid invoices are ever visible to clients.

Creating an Invoice

- 1 Go to Invoices !' click "+ New Invoice"**
The invoice creation form opens.
- 2 Select the client and invoice period**
The client must exist in the Contacts list. The invoice number is auto-generated.
- 3 Add line items**
Each line item has a description, quantity, unit price, and optional property tag.
- 4 Set the due date**
Standard net-30 is the default. Adjust as needed.

5 Save as Draft

Review everything before sending. You can edit a draft at any time.

6 Change to Sent when ready

The invoice becomes visible in the client portal and an email notification can be triggered.

Dispatch Center

Building daily itineraries and briefing field staff before they leave

What Is the Dispatch Center?

The Dispatch Center is where supervisors plan the day's route for field staff. Instead of sending a text or printing a clipboard, the dispatcher builds a digital itinerary — which properties to visit, in what order, how long to spend at each. Field staff see their itinerary on their phones.

Building an Itinerary

- 1 Navigate to Dispatch in the left nav**
The page opens with today's date selected. If an itinerary exists for today, it loads automatically.
- 2 Click "+ New Itinerary"**
Select the date and the staff member the itinerary is for. Name it if helpful (e.g. "Demo Staff 1 — Tuesday Route").
- 3 Add the first stop**
Click "+ Add Stop" !' type to search for a property !' select it. Set the estimated stop duration in minutes.
- 4 Add more stops**
Keep adding stops. The total estimated time accumulates at the top of the itinerary.
- 5 Reorder stops**
Drag any stop up or down to change the route order. The sequence number updates automatically.
- 6 Open the Route Brief**
Click "Route Brief" in the itinerary header. A slide-over panel opens — see below for details.
- 7 Publish**
Click Publish. The itinerary is locked from further editing and pushed to the assigned staff member's schedule.

The Route Brief — Three Tabs

The Route Brief is a pre-departure briefing panel that consolidates everything a field staff member needs to know before they leave — without having to open each property individually. It pulls live data from the platform.

Tab 1: Access Codes

- Shows every access code for every property on the route — door, gate, alarm, pool, Wi-Fi
- Properties are listed in stop order
- Code values are masked (%İ%İ%İ%İ) by default — click the eye icon next to any code to reveal it
- Click "Show All" to reveal all codes at once (logged for audit purposes)
- Codes come directly from each property's Access Control tab — always current

Tab 2: Alerts & Instructions

- Lists all active alerts for the properties on the route, sorted by severity: Critical !' Warning !' Info
- Critical alerts shown in red; Warning in amber; Info in gray
- Two alert types appear: Property Alerts (specific to the address) and Client Notes (notes about the owner/tenant)
- In the demo: Pelican Point has a Critical water leak alert; Gulfstream Manor has a Warning about HOA deadline
- Only active alerts appear — dismissed or expired alerts are excluded

Tab 3: Supplies

- "Bring from Stock" section: supplies due for replacement within the next 30 days that the staff member should load in their van from the supply room
- "Need to Purchase" section: supplies that require ordering online or from a store (items with a purchase URL attached)
- Each supply item shows the room it belongs to, quantity, and a checkbox — staff check items off as they load the van
- Supplies are pulled from each property's Rooms !' Supplies tracking, filtered to those due within 30 days

TIP

The Route Brief replaces the printed clipboard, the group text, and the emailed spreadsheet — all three, in one screen, pulling live data from the platform. Field staff arrive at each property already briefed.

What Field Staff See

Field staff can view their assigned itinerary from their phone's browser. They see:

- Their properties for the day, in order, with addresses and estimated durations
- A "Start Navigation" button that opens the address in Google Maps
- Their assigned tasks at each property — tap to update status in the field
- The Route Brief (access codes tab only visible after tapping "View Brief")

Team Management

Roles, permissions, staff assignments, and communication

The Role Hierarchy

Hubify has three staff roles. Each role sees a different version of the platform — higher roles have full access to everything below them.

Role	What They Can Do	What They Cannot Do
Admin	Everything — billing, settings, team management, all property and client data, feature flags, super-admin actions	Nothing is restricted
Supervisor	View and manage all properties, tasks, contacts, calendar, and dispatch. Can manage staff assignments and approve task completions.	Cannot change org billing settings, subscription, or org-level configuration. Cannot create or delete admin accounts.
Staff	View and update their own assigned tasks and the properties they're assigned to. Can create tasks and log time (if enabled).	Cannot see other staff's tasks, billing, team management, dispatch center, or org settings.

The Demo Team

Account	Role	Supervisor	Notes
Demo Admin	Admin	None	Primary demo account — use this for the full walkthrough
Demo Supervisor	Supervisor	Demo Admin	Shows supervisor-limited view — useful for showing permission differences
Demo Staff 1	Staff	Demo Supervisor	Assigned to Beachside Breeze, Sandpiper, Gulfstream, Lighthouse tasks
Demo Staff 2	Staff	Demo Supervisor	Assigned to Sunset Key, Marina Bay, Coconut Harbor tasks

Inviting a New Team Member

- 1 Navigate to Team !' click "Invite Team Member"**
A modal opens with an invitation form.
- 2 Enter the new member's email and select their role**
You can also pre-assign a supervisor at this step.

3 Click Send Invitation

An email is sent with a secure link. The invitee sets their own password — you never handle their credentials.

4 Track the invitation status

Pending invitations appear in the Team list with an "Invited" badge until the person accepts.

Supervisor Relationships

Supervisors manage a subset of the staff team. The relationship affects:

- Task escalation — when a task is marked urgent and the assigned staff member doesn't respond, the supervisor is notified
- Task assignment — supervisors see only the tasks for staff they manage (unless they also have admin access)
- Approval workflows — in orgs with approval steps enabled, completed tasks route to the supervisor for review

Broadcast Messaging

To send a message to the entire team at once — or to a specific subset — use the Broadcast feature in the Team section:

- Navigate to Team !' Messages !' New Broadcast
- Choose All Staff, Supervisors Only, or specific individuals
- The message appears in their Team Chat feed and triggers an in-app notification
- Useful for weather alerts, schedule changes, safety notices, or company announcements

NOTE

Team Chat on the Dashboard is different from Broadcast Messages. Chat is conversational and informal — like a group text. Broadcasts are more formal one-way announcements from management.

Settings & Customization

Org configuration, feature flags, and notification preferences

Organization Settings — Admin !' Settings

The Admin section (top of the left nav, visible to Admins only) contains all org-level configuration:

Settings Section	What You Can Configure
Company Profile	Org name, address, phone, website, logo upload, timezone, currency
Billing & Subscription	Current plan, billing history, upgrade/downgrade options
Feature Flags	Toggle platform features on or off for your organization — see list below
Email Templates	Customize the content of automated emails sent to clients (invoice notifications, portal welcome, reminders)
Custom Fields	Add custom data fields to properties, contacts, or tasks — visible in forms and export
Supply Settings	Default categories and units for room supply tracking
API Keys	Generate API keys for integrations or webhook endpoints
Integrations	Connect Zapier (if flag enabled), configure webhook endpoints for outbound event delivery

Feature Flags — What Each One Controls

Feature flags let you selectively enable or disable platform capabilities per organization. Navigate to Admin !' Settings !' Feature Flags to see the toggles:

Flag	What It Enables When ON
mobile_field_mode	A mobile-optimized "Field Mode" interface for field staff — simplified view, large tap targets, offline-ready task management
task_cost_tracking	Time Tracking — clock in/out on tasks, billable vs. non-billable time, time reports. Adds Time Tracking to the nav.
community_profiles	Community management — associate properties with HOA communities, track community documents and rules
zapier_integration	Webhook endpoints for Zapier and other automation tools — trigger workflows when tasks complete, invoices send, etc.
advanced_reporting	Reports tab in Account settings and a Time Report inside Time Tracking — exportable data views

mobile_push_notifications	Push notification opt-in toggle in user notification preferences — requires mobile browser support
white_label_branding	Branding tab in Portal Settings — upload org logo, set colors, customize the client portal to match your brand

TIP

The demo org has all feature flags enabled so you can see every feature during a walkthrough. In a real org, flags can be toggled at any time by an Admin — changes take effect immediately.

Notification Preferences

Each user sets their own notification preferences. Navigate to User Menu !' Notification Preferences:

- Task notifications — alert when a task is assigned to you, completed by someone you supervise, or becomes overdue
- Invoice notifications — alert when an invoice is paid, when one becomes overdue
- Calendar notifications — alerts before scheduled events (15 min, 1 hour, 1 day ahead)
- System notifications — platform alerts sent by admins to specific users or groups
- Email digest — daily or weekly summary of activity (configurable frequency)

Dashboard Widget Customization

- 1

Click the gear (&™) icon on the Dashboard
The customization panel slides in from the right.
- 2

Toggle widgets on or off
Disable widgets you don't use. Changes apply immediately.
- 3

Reorder by drag-and-drop
Drag any widget in the panel to set its position on the dashboard.
- 4

Close the panel
Your layout is saved automatically — it persists across sessions.

Tips, Shortcuts & FAQs

Power-user techniques, keyboard shortcuts, and common questions answered

Keyboard Shortcuts

- T** Open the quick-create task form from anywhere in the platform
- /** Focus the global search bar — search properties, tasks, contacts by name
- Esc** Close any open modal, panel, or slide-over
- !• !'** Navigate between calendar weeks/months without using the mouse
- Enter** Submit the focused form (works in quick-task, team chat, search)

Power-User Tips

Use the global search for everything

Press / from any page. Type a property name, contact name, task title, or invoice number. Results appear in real time across all categories — no need to navigate to a specific section first.

Complete tasks from the Urgent Tasks widget

You don't need to open a task's detail page to change its status. From the Urgent Tasks widget on the Dashboard, hover over a task and click the status button directly. This is the fastest way to process a batch of urgent items.

Use the task list filter combinations

The Tasks page supports multi-filter combinations. Example: filter by Property = Gulfstream Manor + Status = In Progress + Priority = Urgent to see exactly what's happening at that address right now. Filters stack and the URL updates so you can bookmark or share the filtered view.

Link events to tasks for a complete picture

When creating a calendar event for a vendor visit, attach the related task. This creates a bidirectional link — from the task you can see when the vendor is scheduled; from the calendar event you can jump to the task status.

Reset the demo without losing credentials

If the demo data gets messy after a walkthrough, reset it without losing your login: Super Admin !' Demo tab !' "Reset Demo Data". All 10 properties, tasks, invoices, events, and notifications are wiped and reseeded in about 30 seconds. Your admin account and password are unchanged.

RESET

The reset is non-destructive to the org itself and the admin account. Only mutable data (tasks, invoices, events, notifications) is wiped and reseeded. Properties are preserved with updated data.

Frequently Asked Questions

Why can't I see the Invoices section?

Invoices are visible to Admin and Supervisor roles only. If you're logged in as a Staff account, navigate to Admin !' Team !' click your account and upgrade the role to Supervisor.

Why does the dashboard show 0 urgent tasks?

Make sure you're logged in as Demo Admin (demo@hubifyhomesonline.com). The urgent task count is scoped to the demo org. If the count still shows 0 after login, try running a demo reset from the Super Admin panel — the seed data may be stale.

How do I see what a client sees?

The client portal is a completely separate interface at /portal/login. In the demo the portal client account has been removed from the public-facing guide — contact your Hubify representative if you need portal access credentials for a demo.

Can I create real test data during a demo?

Yes — everything you create during a demo is saved to the demo environment and will persist until the next reset. Feel free to create tasks, events, or invoices to show a live workflow. Just don't use real client names or real financial data.

How do I add a new property to the demo?

Go to Properties !' click "+ New Property". Fill in the name, address, and type. The property immediately appears in all list views, can have tasks created against it, and can be added to a dispatch itinerary. It will be removed on the next demo reset.

Does Hubify work on mobile?

Yes. The full staff platform is responsive and works in any mobile browser. For field staff, the mobile experience is optimized in "Field Mode" (feature flag: mobile_field_mode) — a simplified, touch-first interface showing only the current day's tasks and assigned properties.

What happens when I click "Publish" in Dispatch?

Publishing locks the itinerary so it can't be accidentally changed, and pushes it to the assigned staff member's view. They see it in their schedule immediately. If the itinerary was for today, it also appears in the calendar as a scheduled block.

Questions about the demo or the platform? Contact your Hubify account manager or visit hubifyhomesonline.com.
