- 9 FAQs & Objection Responses

HOW TO USE

This guide is for the person running the demo. Keep it open alongside the live site as you walk through each section.

Demo Credentials & First Login

One staff admin account — full platform access

Staff Admin Account (full platform access)

We use cookies

We use essential cookies to run Hubify. With your permission, we'd also like to use preference and analytics cookies to enhance your experience. You can change your choice anytime from "Cookie preferences" in the footer. See our [Privacy Policy](#).

URL: /staff/login !' sign in with email and password

Email: demo@hubifyhomesonline.com

Password: Demo2026!

Demo Organization

The demo org is "Hubify Demo Portfolio" — a fictional Florida-based property management company. Everything you see after login is pre-loaded with realistic operational data across 10 active properties.

IMPORTANT Never enter real client data into the demo environment. The demo can be fully reset from Super Admin at any time.

Demo Team Members

Account	Role & Purpose
Demo Admin	Full admin access — the primary account for all staff walkthroughs
Demo Supervisor	Supervisor role — shows permission differences from admin

Demo Staff 1

Field staff — assigned to most on-site tasks in the demo

Demo Staff 2

Field staff — shows task assignment and handoff scenarios

TIP

After logging in, the dashboard loads automatically with live data from all 10 demo properties — no setup or configuration needed.

Dashboard — Your Opening Slide

The first screen after login — sets the stage for the whole demo

Dashboard — / (opens automatically after login)

The Dashboard loads the moment you sign in. Every widget pulls live data from the demo properties — nothing is hardcoded or mocked.

What You'll See on the Dashboard

Widget	What to Point Out
Statistics Overview	10 properties active; task counts by status; pending invoices; team members — a real portfolio at a glance
Urgent / Overdue Tasks	3–5 overdue and high-priority tasks across the demo portfolio — use these as your entry point to Tasks
Recent Activity Feed	Latest platform actions — confirms everything is live operational data
Calendar Preview	Upcoming scheduled visits and vendor appointments — 5+ pre-seeded events
Team Chat	Pre-seeded messages from demo staff — shows the real-time communication feed

Opening Script

"When you log in every morning, this is your command center. You can see immediately if anything is urgent — right now there are overdue tasks that need attention. Let me click into one..."

TIP If the prospect's pain is billing, go straight to Invoices after the dashboard. If it's task management, click an overdue task. Always follow their pain point, not a fixed script.

The 10 Demo Properties

A diverse Florida portfolio — every common property management scenario is covered

Properties list — covers single-family, condos, luxury estates, and seasonal/snowbird homes

Each property is pre-loaded with tasks, access codes, vendor links, contacts, and inspection checklists. Navigate to any property !' use the tabs: Overview, Tasks, Rooms, Access Control, Inspections.

1

Beachside Breeze

Home Watch · Naples, FL

Scenario: HVAC fault discovered before owner arrival — urgent task open, vendor dispatched

"Bread-and-butter home watch scenario. Show the task, the photo attachment, and how the owner gets notified."

2

Sunset Key Villa

Luxury Estate · Naples, FL

Scenario: Pool heater down + smart-home system offline — two open repair issues

"Great for luxury clients. Show the priority flag and vendor contact already linked for the repair."

3

Coconut Harbor Retreat

Seasonal / Snowbird · Fort Myers, FL

Scenario: Hurricane prep tasks active — shows seasonal checklist and recurring schedule workflow

"Perfect for snowbird managers. Show the recurring inspection schedule and checklist items."

4

Pelican Point Cottage

Emergency · Naples, FL

Scenario: Active water leak discovered during routine check — critical alert, plumber on-site today

"High-drama scenario. Click the critical alert badge and show how the team gets notified instantly."

5

Royal Palm Estate

VIP Luxury · Palm Beach, FL

Scenario: Owner event preparation — 6 vendors being coordinated, pre-event inspection completed

"Shows multi-vendor coordination and multi-step task management for high-end clients."

6

Marina Bay Condo

Rental · Fort Lauderdale, FL

Scenario: Guest turnover in progress — smart lock reset overdue, new guests arriving tomorrow

"Ideal for property managers with rental inventory. Show the urgent lock reset task."

7

Gulfstream Manor

High Maintenance · Bonita Springs, FL

Scenario: Irrigation repair 3 days overdue + HOA violation risk if unresolved within 7 days

"Shows priority escalation. The overdue badge and HOA countdown make the urgency clear."

8

The Sandpiper

Seasonal Arrival · Sarasota, FL

Scenario: Owner arriving 2 days early — rush prep tasks created, cleaning dispatched same-day

"Shows how Hubify handles schedule changes. Rush tasks were created when arrival moved up."

9

Lighthouse Point

Storm Damage · Key West, FL

Scenario: Roof leak after storm — insurance documentation tasks active, roofer on-site today

"Point out the photo attachments — field staff photographed the damage on-site during the inspection."

10

Oceanfront Oasis

Stable Premium · Delray Beach, FL

Scenario: All tasks current, no open issues — 4-year client with weekly and monthly recurring schedule

""This is what a healthy account looks like." Use to contrast with the problem properties above."

TIP

Navigate to any property !' Tasks tab to see all open, in-progress, and completed tasks for that address. The progress bar shows current status at a glance.

Tasks & Inspections

The operational heart of the platform — 40+ pre-seeded tasks across all 10 properties

Task list — filter by status, property, assignee, or due date in real time

Task Status Mix in the Demo

- Pending** Scheduled, not yet started — due today or in coming days
- In Progress** Actively being worked on — field staff on-site
- Completed** Done with timestamp — shows completed history
- Overdue** Past due date, still open — creates urgency in the demo

Key Things to Demonstrate

- 1 Open an overdue task**
Click an overdue item from the dashboard. Open the Gulfstream Manor irrigation task — it has an urgent priority badge, HOA note, and days-overdue indicator.
- 2 Complete a task live**
Open any "In Progress" task and move it to Completed. The timestamp records automatically. Say: "This is what your field staff does on their phone when the job is done."
- 3 Show recurring tasks**
Open Oceanfront Oasis ' Tasks and find the weekly home watch. Show the recurrence schedule — next instance auto-creates on completion.
- 4 Walk through an inspection checklist**
Open any property ' Inspections tab. Walk through a pre-seeded checklist: pass/fail results, notes, and photo attachments per room.

5 Create a task from a template

Click "+ Task" !' "Use Template". Show the Hurricane Prep or Turnover templates — pre-filled with checklist, estimated time, and priority.

TIP Press T from anywhere to open the quick-task form — 15 seconds to create a task. This is the "wow" moment for most prospects.

SECTION 05

Calendar

10 pre-seeded events across all properties — conflict detection live

Calendar — week and month views; staff scheduling and vendor appointments

The calendar has 10 demo events already in place. Several are linked to specific properties and vendor visits. Two overlap on the same staff member — this triggers the live conflict detection system.

Pre-Seeded Events

Event	What to Point Out
Weekly Team Standup	Recurring Monday 9am — whole team; shows non-property scheduling
CoolBreeze HVAC — Beachside	Tomorrow 10am — vendor visit linked to the HVAC task; shows property-event connection
SmartHome Tech — Sunset Key	Tomorrow 1pm — linked to the smart-home offline task
FastFlow Plumbing — Pelican	Today 8am — intentionally overlaps with another staff assignment (conflict trigger)
Owner Arrival — The Sandpiper	2 days out — shows rush-arrival prep event with multi-staff attendance
Hurricane Prep Deadline	Today 6am — Coconut Harbor deadline event with task link
StormGuard Roofing — Lighthouse	Today 9am — same-day vendor on-site; shows emergency scheduling
Owner Event — Royal Palm	6 days out — VIP event; shows supervisor managing high-value appointment
Pre-Event Walkthrough	5 days out — day-before inspection linked to Royal Palm event

Conflict Detection Demo

"Navigate to the **Calendar** and look at today's events. The **FastFlow Plumbing** visit overlaps with another staff assignment for the same person. Hubify flags this immediately — your supervisors see conflicts in real time."

iCal Sync

1 Open User Menu !' Settings !' Calendar

The iCal feed URL is shown in the **Subscribe** section.

2 Paste into Google Calendar or Outlook

"Add calendar by URL" — all Hubify events flow into their existing calendar, read-only, and update automatically.

Invoices & Billing

7 invoices across every status — including a consolidated batch invoice

Invoices list — sortable by status, client, amount, and due date

The demo has invoices in every possible state, including a consolidated batch invoice — the feature prospects most frequently cite as a must-have.

Demo Invoices

Invoice #	Status / Amount / Property
DEMO-2026-001	Paid · \$385 · Beachside Breeze · April home watch + weekly inspections
DEMO-2026-002	Open · \$520 · Beachside Breeze · May service + HVAC emergency coordination
DEMO-2026-003	Paid · \$1,850 · Royal Palm Estate · April full estate management + event prep
DEMO-2026-004	Open · \$2,460 · Royal Palm Estate · May estate + owner event (6 vendors)
DEMO-2026-005	Paid · \$285 · Marina Bay Condo · April turnover management + inspection
DEMO-2026-006	Open · \$310 · Marina Bay Condo · May turnover + guest prep
DEMO-2026-CONSOL	Draft (Batch) · \$985 · Beachside + Royal Palm + Marina Bay · May 2026 preview

What to Demo

- 1

Open the consolidated batch invoice

Find DEMO-2026-CONSOL. Open it and scroll through the multi-property line items — three clients, single PDF. Say: "One invoice, one payment — instead of three separate sends."

2 Change a status (draft !' sent)

Open DEMO-2026-CONSOL. Change status to Sent. "The moment you flip this, it becomes visible in the client portal — clients can't see drafts no matter what. No accidental sends."

3 Show a paid invoice with Stripe receipt

Open DEMO-2026-001. Show the payment method (Visa 4242), payment date, and Stripe receipt link — all captured automatically via webhook when the client paid online.

4 Invoice PDF preview

Click the PDF icon on any invoice. The formatted invoice opens in a new tab — ready to download, email, or print.

KEY POINT

Draft invoices are never visible in the client portal — regardless of any setting. Clients only ever see Sent and Paid invoices.

Dispatch Center

Build daily itineraries and brief field staff before they leave

Dispatch Center — daily itinerary builder with Route Brief slide-over

The Dispatch Center is where supervisors plan the day's property route for field staff — assigning which properties to visit, in what order, with stop durations and a full pre-departure brief.

How to Demo It

- 1 Navigate to Dispatch**
Click Dispatch in the main nav (Admin and Supervisor roles only). The today panel opens automatically.
- 2 Select or create an itinerary**
Click "New Itinerary" to create from scratch, or select today's if one exists from the left panel.
- 3 Add stops**
Click "+ Add Stop" !' select a property !' set an estimated duration. Drag to reorder the route.
- 4 Open the Route Brief**
Click the "Route Brief" button in the itinerary header. A side panel slides open with three tabs.
- 5 Walk through the Route Brief tabs**
Access Codes (tap eye icon to reveal), Alerts & Instructions (severity-sorted), Supplies (bring from stock vs. need to order).
- 6 Publish the itinerary**
Click Publish. The itinerary pushes to the assigned staff member's schedule.

Route Brief — Three Tabs

Tab	What to Say
Access Codes	All property codes for every stop on the route — door, gate, alarm, Wi-Fi. Values are masked by default; tap the eye icon to reveal. Prevents codes being visible during team briefings.

Alerts & Instructions

Active property alerts (critical !' warning !' info) plus client notes. Critical items appear first in red. "Before your team leaves, they know about the dog, the alarm quirk, and the flooded back room."

Supplies

"Bring from stock" vs. "Need to purchase" — items due for replacement within 30 days, grouped by property. Checkboxes let staff tick off what's loaded in the van.

TIP

"This replaces the clipboard, the group text, and the spreadsheet your dispatcher emailed this morning — all in one screen, always current, for every property on the route."

SECTION 08

Team Management

Roles, assignments, and staff coordination

Team page — roster, roles, assignments, and invite flow

The demo team has 4 members: 1 admin, 1 supervisor, and 2 field staff — representing a typical small-to-mid-size operation. Navigate to Team in the main nav to show staff management.

What to Show

- Role hierarchy — Admin !' Supervisor !' Staff; each role sees a different version of the platform
- Inviting a new team member — click "Invite Team Member", enter an email, assign a role; they receive the invitation automatically
- Supervisor relationships — Demo Staff 1 has Demo Supervisor assigned; explains how task escalation flows
- Broadcast messaging — send a message or notification to the entire team from the Messages section

Role Permissions

Role	What They Can Access
Admin	Full access — billing, settings, team management, all property data
Supervisor	All operational data; cannot change org settings or billing; manages task assignments
Staff	Own tasks and assigned properties only — no billing, no team management

Time Tracking (if enabled)

If the prospect needs billable time logging, confirm the Time Tracking feature flag is on in Settings !' Feature Flags before the demo. When enabled, staff can clock in and out on tasks and supervisors see a live time report.

FEATURE FLAGS Features like Time Tracking, Zapier integration, and advanced reports are controlled by feature flags — easily toggled per organization.

FAQs & Objection Responses

Common questions and how to answer them confidently

"We already use spreadsheets / a different tool."

Hubify isn't just a better spreadsheet — it connects the job (task), the place (property), the person (client), and the money (invoice) in one record. When you complete a task, it's already attached to the right property and ready to invoice. No retyping, no cross-referencing between five tabs.

"Our clients don't want a portal — they just call us."

The portal doesn't replace the phone call — it answers the questions that don't need one. "Did the inspector go today?" "Where's my invoice?" "Did that leak get fixed?" Clients check the portal and find the answer instantly. You get fewer interruptions; they get 24/7 visibility.

"What about importing our existing data?"

We have a CSV import tool with AI-assisted field mapping — import your existing properties, contacts, and tasks. Most teams are fully migrated in a day. We also offer white-glove onboarding for larger portfolios.

"Is our data secure?"

Hubify is fully multi-tenant — each organization is completely isolated. Client data is encrypted at rest and in transit. Access codes are stored encrypted. We're built on enterprise-grade infrastructure with SOC 2-aligned practices.

"What does it cost?"

Pricing is based on the number of active properties in your portfolio. I can pull up the current plan options and we can walk through which tier fits your team. Would you like to do that now, or finish the demo first?

"We tried software before and the team didn't adopt it."

Hubify's field staff interface works on any phone browser — no app to install, no training manual. Staff see only their assigned tasks. Supervisors see everything. The simpler the interface, the higher the adoption. Most teams are fully operational within a week.

"Can we try it before committing?"

Absolutely — that's what this demo is for. After this walkthrough, we can set up a trial environment with your actual properties so you can see exactly how Hubify would work for your business.

Demo Reset

If demo data gets changed during a walkthrough, reset it from Super Admin !' Demo tab !' "Reset Demo Data". This wipes and reseeds everything in about 30 seconds — the 10 properties, all tasks with their statuses, invoices, calendar events, and notifications are fully restored. The admin login is never changed.
