Getting Started

Login, navigation, and your first session

01

Hubify runs entirely in your web browser — nothing to install. If you've received an invitation email, you already have everything you need to get started.

Logging In

Hubify uses Replit for secure authentication. Your account is linked to your organization by email address.

1 Open the Hubify URL

Navigate to your organization's Hubify address and click the blue Login button in the top-right corner.

2 Sign in with Replit

You'll be redirected to Replit's login page. Use the same email address your admin used when they invited you.

3 You're in

After a successful sign-in you land on your Dashboard automatically. Your role and organization are set by your admin.

TIP Your login email must exactly match the address your admin entered. If you can't get in, ask your admin to verify the email on your account.

The Navigation Bar

The top navigation bar is always visible. It contains:

- Hubify logo (left) — click to return to the Dashboard from anywhere
- Dashboard, Tasks, Properties, Clients, Team — the five main sections of the app
- Search bar — press S or # K to open global search; find tasks, properties, people, anything
- Notification bell — shows an unread count badge; click to open the notifications panel
- User menu (top-right) — Messages, Calendar, Time Tracking, Settings, and Logout

User Roles at a Glance

Role	Access Level
Admin	Full access to all features, settings, billing, and team management
Supervisor	Can manage staff and view all data; cannot change org-level settings
Staff	Can see and act on tasks and properties assigned to them

Dashboard

Your command center for daily operations

02

The Dashboard gives you an instant snapshot of everything important happening right now. It loads the moment you log in and updates in real time.

Dashboard Widgets

Widget	What It Shows
Urgent Tasks	Tasks that are overdue or marked high/urgent priority — click any to open it
Statistics Overview	Key numbers: total properties, open tasks, team size, pending invoices
Team Chat	Post quick updates and @mention teammates; all team members see this feed
Recent Activity	A chronological log of changes made across the platform
Calendar	Upcoming events and task due dates (toggle on in widget settings)
Billing Queue	Invoices awaiting review — visible to Admins and Supervisors only

Customizing Your Dashboard

- 1 Click the gear icon**
Located in the top-right corner of the Dashboard header.
- 2 Toggle widgets on or off**
Enable only the widgets that are relevant to your daily workflow.
- 3 Reorder by dragging**
Drag widgets into the order that makes sense for how you work.
- 4 Save**
Your layout is saved automatically and persists between sessions.

TIP Press T anywhere on the platform to instantly open the quick-add task form. Press S to open global search. Press ? to open the support form.

Getting Started Card

New users see a "Getting Started" card at the top of the Dashboard for the first 14 days. It links to the four most important setup steps — adding properties, inviting team members, creating a task, and configuring the client portal. Dismiss it once you're set up.

Properties

03

The foundation that every task, invoice, and client record ties back to

Properties are the core record in Hubify. Every task, inspection, invoice, and client relationship is connected to a property. Each property has a full profile page with everything in one place.

Adding a Property

- 1 Go to Properties**
Click "Properties" in the top navigation bar.
- 2 Click "+ Add Property"**
Enter the property address and type. Additional fields (owner, notes, size) can be filled in now or later.
- 3 Add access codes**
On the property profile, open the Access Control section. Store door codes, Wi-Fi passwords, alarm codes, and gate codes — all encrypted.
- 4 Link contacts**
Attach the property owner and any related clients, tenants, or vendors from the Contacts tab.
- 5 Add preferred vendors**
Link your go-to plumber, electrician, landscaper, etc. so the right contact is always at hand when something needs attention.

Importing Properties via CSV

If you have an existing property list in a spreadsheet, use Admin !' Import !' Properties. Upload the CSV and Hubify will map your columns — including AI-assisted field matching for non-standard headers. Review the mapping, then import in bulk.

Property Profile Tabs

- Overview — address, type, owner name, notes, last visited date
- Tasks — all open and completed tasks linked to this property
- Rooms — room-by-room detail with photos, supply tracking, and notes
- Access Control — all secure codes and credentials
- Warranties — appliance and system warranties with expiry dates
- Vendors — preferred vendors for this specific property
- Documents — files and photos stored against this property
- Inspections — past reports and upcoming scheduled inspections

TIP Use the Access Control section for all codes and passwords — never put them in task notes where they might be shared accidentally.

Tasks

How every job gets tracked from assignment to completion

04

Tasks are how work gets done in Hubify. Every job — routine check, repair, inspection, vendor visit, or errand — should be a task. This keeps your history accurate and your invoicing clean.

Creating a Task

1 Press T or click "+ Task"

The quick-add form opens immediately from anywhere in the app.

2 Give it a clear title

Good titles are specific: "Annual AC filter replacement – 123 Main" beats "AC task".

3 Assign it

Link the task to a property and assign it to a team member. Set a due date.

4 Set priority

Urgent and High-priority tasks surface prominently on the dashboard and notification list.

5 Add photos or notes

Attach before/after photos, written notes, or a checklist. For repeat work, set a recurrence schedule.

6 Save

The assignee sees the task on their list and receives a notification.

Task Statuses

Open

Newly created; not yet started

In Progress

Actively being worked on

Completed

Work is done; ready for review or invoicing

Archived

Removed from active views but preserved in history

Task Priorities

- Urgent — immediately visible on the dashboard; assignee notified with high urgency
- High — surfaced in the Urgent Tasks widget alongside Urgent items
- Normal — standard task, visible in the task list
- Low — background work; filtered out of urgent views

Recurring Tasks

For work that repeats on a schedule (weekly property checks, monthly inspections, seasonal preparation), enable Recurring when creating the task. Set the frequency (daily / weekly / monthly / custom) and Hubify automatically creates the next instance when you complete the current one.

Task Templates

Save any task as a reusable template via Admin !' Templates. Templates can include a pre-filled checklist, description, priority, and estimated duration. Create complex multi-step tasks in a single click — ideal for move-in/move-out checklists and seasonal routines.

Inspections

Inspections are a special task type with a built-in checklist system. Create an inspection schedule on a property and Hubify will automatically generate the inspection task on the right day, complete with the associated checklist for field staff to fill out on site.

TIP Create a task for every job, even small ones. This builds your property history and gives you accurate data for invoicing and reporting.

Contacts

Everyone connected to your business, in one place

05

Contacts stores all the people and companies you work with: property owners, clients, tenants, vendors, emergency contacts, and more. Contacts are universal — they can be linked to multiple properties and to the client portal.

Contact Types

Type	Description
Owner	The person financially responsible for a property
Client	A paying client; can be invited to the portal for self-service access
Vendor	A service provider — plumber, landscaper, cleaner, electrician, etc.
Tenant	A resident at a managed property
Emergency	A backup contact for urgent situations at a specific property

Adding a Contact

- 1 Go to Contacts**
Click "Clients" in the navigation bar — this opens the full Contacts section.
- 2 Click "+ Add Contact"**
Enter name, email, phone, and type. All fields except name are optional.
- 3 Link to properties**
From the contact's Properties tab, attach them to one or more properties. You can also link from the property side.
- 4 Invite to portal (clients)**
For client contacts, click "Invite to Portal" to send them an email with their login link.

Vendor Employees

For vendor companies, you can add individual employees within their contact record. This is useful when a vendor has multiple technicians who you work with directly.

Duplicate Detection

When you add a new contact, Hubify checks for existing records with the same name or email address and flags potential duplicates. Review them from the Duplicates widget on the dashboard — you can merge or dismiss each one.

Team

Managing the people who do the work

06

The Team section is where you manage your staff — their roles, assignments, schedules, and communication. Only Admins and Supervisors can invite or edit team members.

Inviting a Team Member

1 Go to Team

Click "Team" in the navigation bar.

2 Click "Invite Team Member"

Enter their first name, last name, email address, and role.

3 They receive an invitation email

The email explains what Hubify is, their role, and has a "Log in to Hubify" button.

4 They sign in

When they log in with the same email address, their account is automatically linked to your organization.

Teams

Create sub-teams to group staff by function, region, or property set — for example: "South Zone", "Luxury Portfolio", "Maintenance Crew". Teams can be:

- Assigned tasks collectively — assign a task to a team and any member can pick it up
- Emailed as a group — use the broadcast email tool to message an entire team at once
- Reported on — filter task and time tracking reports by team

Out of Office

Staff can mark themselves as out of office for a specific date range. During that period, tasks cannot be assigned to them and any existing upcoming assignments are flagged. This prevents scheduling conflicts and ensures work gets covered.

Supervisor Relationships

Assign a supervisor to each staff member to establish reporting lines. Supervisors can see and manage the tasks assigned to their direct reports, making delegation and follow-up easier.

NOTE Supervisors do not have access to billing, admin settings, or organization-wide reports unless those features are specifically enabled for them.

Calendar

Scheduling, conflicts, and iCal sync

07

The Calendar gives you a visual view of everything scheduled — property visits, inspections, team meetings, task due dates, and client appointments.

Creating an Event

- 1 Click on any date**
A quick-create form opens for the selected date.
- 2 Fill in the details**
Give the event a title, attach it to a property (optional), and assign one or more team members.
- 3 Set recurrence**
For regular events (weekly team standups, monthly walkthroughs), enable the recurring option and set the frequency.
- 4 Save**
The event appears on the calendar and assigned staff are notified.

Calendar Views

- Month view — see the full month at a glance; events shown as colored chips by type
- Week view — detailed view of a single week with time slots
- Day view — hour-by-hour schedule for a single day
- Agenda view — list of upcoming events in chronological order

Conflict Detection

Hubify automatically checks for scheduling conflicts when you create or edit an event. If two events overlap for the same team member, a warning is shown immediately. A full conflict scan also runs automatically twice a day (2am and 2pm) and results are visible in the dashboard notifications.

iCal Subscription (Personal Calendar Sync)

- 1 Open your User Menu**
Click your name or avatar in the top-right corner.
- 2 Go to Calendar !' Subscribe**
Copy your personal iCal feed URL.
- 3 Add to your calendar app**
Paste the URL into Google Calendar (Add by URL), Apple Calendar, or Outlook as a new calendar subscription.

4 Done

Your Hubify events now appear in your personal calendar — read-only and automatically synced.

TIP The iCal feed is read-only. Changes must be made inside Hubify, and your calendar app will sync them on its normal refresh interval (usually every few hours).

Invoices & Billing

From line items to payment collection

08

Hubify includes a complete invoicing system — from creating individual invoices to batching multiple invoices for a client into one consolidated bill. Stripe integration enables clients to pay directly from their portal.

Invoice Statuses

Draft	Internal only — clients cannot see draft invoices
Sent	Visible in client portal; awaiting payment
Paid	Payment confirmed; record closed
Overdue	Due date passed without payment; automated reminders active

Creating an Invoice

- 1 Go to Admin !' Invoices**
All invoices are managed from the Admin section — Admins and Supervisors only.
- 2 Click "+ New Invoice"**
Select the client and the property (or properties). Invoices can span multiple properties.
- 3 Add line items**
Each line item has a description, quantity, unit price, and an optional category (labor, materials, travel, etc.).
- 4 Save as Draft**
Drafts are internal only and never shown to clients until you're ready.
- 5 Change status to Sent**
The client can now see and pay the invoice from their portal.

Consolidated Batch Invoices

For clients with activity across multiple properties in a billing period, use Batch Invoices to combine everything into a single organized bill:

- 1 Go to Admin !' Billing !' Batch Invoices**
- 2 Select the client**
- 3 Choose the individual invoices to include**

4 Hubify generates a consolidated document with all line items and a summary total

Connecting Stripe

When Stripe is connected (Admin !' Billing !' Connect Stripe), clients can pay invoices directly from their portal using a credit card. Payment status is tracked automatically via webhook — no manual reconciliation needed.

NOTE Stripe payments require a Stripe account. Contact your Hubify admin or the Hubify support team to complete the Stripe onboarding process.

Client Portal

A private, branded view for your clients

09

The Client Portal is a separate web interface where your clients can log in and see their properties, task progress, invoices, and documents — without any access to your internal tools or other clients' data.

Setting Up the Portal

- 1 Enable the portal**
Go to Admin !' Client Portal Settings and toggle the portal on for your organization.
- 2 Set your welcome message**
Write the message clients see when they first log in. Keep it friendly and brief.
- 3 Add branding (optional)**
Upload your company logo to appear on the portal login page and header.
- 4 Invite a client**
From a client's contact record, click "Invite to Portal". An invitation email is sent with their login link.
- 5 Share the portal URL**
The portal lives at /portal/login on your Hubify domain. Share this with clients alongside their invitation.

What Clients Can See

Portal Tab	What the Client Sees
My Properties	Property overview, address, and current status
My Tasks	Active and recent tasks on their properties — no internal staff notes visible
My Invoices	Sent and paid invoices only — draft invoices are always hidden
Documents	Files you have explicitly shared with them

TIP Clients only ever see invoices with status Sent or Paid. Drafts are always hidden from the portal, regardless of settings.

Client Portal Login

Clients create their own password when they accept their invitation. They log in at your portal URL with their email and password — this is separate from the Replit login used by your staff.

Admin Settings

Organization-wide configuration (Admin role required)

10

The Admin section is accessible to Admins and Supervisors from the top navigation. It controls all operational settings for your organization.

Admin Tabs Overview

Tab	What You Can Do
General	Organization name, contact email, default hourly rate, timezone
Invoices	View and manage all invoices across the organization; create batch invoices
Billing	Stripe integration, subscription plan, payment settings
Client Portal	Portal on/off switch, welcome message, branding settings
Templates	Reusable task templates and email templates
Import	CSV import for properties, contacts, and tasks with AI field mapping
Forms	Custom forms for field staff to fill out on site
Alerts	Create and manage organization-wide alert banners for your team
Email Templates	Pre-built email templates with merge fields for consistent client communication

Setting a Default Hourly Rate

Go to Admin !' General and set your organization's default hourly rate. This rate pre-fills on new time entries and invoice line items, saving time when billing for labor. Individual rates can be overridden per entry.

Import Manager

- 1 Go to Admin !' Import**
Choose the data type: Properties, Contacts, or Tasks.
- 2 Download the sample CSV**
Use this as a template to format your data correctly.
- 3 Upload your file**
Hubify reads your column headers and attempts to auto-match them.
- 4 Review the field mapping**
Confirm each column maps to the right Hubify field. AI-assisted matching handles most non-standard header names.

5

Import

Records are created in bulk. Any rows with errors are flagged in a results summary.

Account Settings

Your personal preferences and profile

11

Account Settings are personal — they affect only your account, not other users. Access them from the User Menu (top-right) !' Settings, or by clicking your name.

What You Can Configure

Setting	Description
Profile	Update your name and profile photo
Notifications	Choose which events trigger email or in-app alerts; turn off anything irrelevant to your role
Subscription	View your organization's current plan and usage (Admin only)
Integrations	Connect third-party services: Zapier webhooks, API keys
Security	View your active sessions; useful if you've logged in on a device you no longer use
Forms	Jump to the forms management page
Email Templates	Jump to the email templates page
Task Templates	Jump to task templates in Admin
Team Roles	Jump to team and role management

Notification Preferences

Go to Account Settings !' Notifications to choose which events generate in-app alerts and which send an email. You can toggle each notification type independently. Turning off email notifications will not disable in-app alerts for the same event.

Time Tracking

Logging billable and non-billable hours against tasks and properties

12

Time Tracking allows staff to log hours worked against specific tasks and properties. Billable time flows directly into invoice line items — so your billing is always based on accurate, real data.

Clocking In and Out

1 Open Time Tracking

Go to User Menu !' Time Tracking, or navigate directly to /time-tracking.

2 Click "Clock In"

Select the task or property you're working on. The timer starts immediately.

3 Click "Clock Out"

The session duration is recorded automatically. Add a note if needed.

4 Or log time manually

Click "+ Add Time Entry", enter the date, duration, task, and whether it's billable.

Billable vs Non-Billable

When logging time, mark each entry as billable or non-billable:

- Billable — appears as a line item candidate when generating invoices for the associated property
- Non-billable — tracked for internal reporting only; never appears on client invoices

Time Reports

Admins can run time reports filtered by staff member, property, date range, or billable status from the Reports tab within Time Tracking. Reports can be exported for use in external payroll or accounting systems.

TIP Make it a habit to clock in and out on every job rather than logging manually afterward — it's more accurate and takes less than five seconds on a phone.

Messages & Team Chat

Two ways to communicate inside Hubify

13

Hubify provides two complementary communication tools: Messages for formal, email-based communication with contacts and teams, and Team Chat for quick informal coordination.

Messages

The Messages section (User Menu ! Messages) is a full email client inside Hubify. You can:

- Compose and send emails to individual contacts or entire teams
- Use email templates with merge fields ({{first_name}}, {{property_address}}, etc.) for consistent messaging
- Schedule messages to send at a future date and time
- View sent message history against each contact record
- Send broadcast emails to all members of a specific team at once

Team Chat

The Team Chat widget on the dashboard is an informal, real-time feed visible to everyone in your organization. Think of it as a shared group message thread:

- Type a message and press Enter to post
- Use @FirstName to mention a specific person — they receive a notification
- Edit or delete your own messages
- React to messages with emoji
- Enable email notification on a message to alert the team by email as well as in-app

TIP Use Team Chat for quick updates like "finished 123 Main, key returned". For anything task-related, add a note directly to the task so the context stays attached to the work record.

Notifications

Staying on top of what matters

14

Hubify sends in-app notifications for events that require your attention. The bell icon in the navigation bar shows a badge with the count of unread items. Click it to open the notifications slide-over panel.

What Triggers a Notification

- A task has been assigned to you
- A task you're assigned to is approaching its due date or is now overdue
- You were @mentioned in Team Chat
- A task you're watching was updated or commented on
- An invoice's status changed (Admin role)
- A scheduling conflict was detected on the calendar
- A system alert was created by your admin
- A team member has been added or removed from the organization (Admin role)

Managing Your Notification Preferences

- 1 **Open Account Settings !' Notifications**
- 2 **Toggle each notification type on or off individually**
- 3 **Choose whether each type triggers an email, an in-app alert, or both**
- 4 **Save — changes take effect immediately**

In-App Notification Panel

Click the bell icon to open the notifications panel. Mark individual notifications as read by clicking them, or use "Mark all as read" to clear the badge. Notifications older than 90 days are automatically archived.

Tips & Keyboard Shortcuts

Work faster and smarter

15

Keyboard Shortcuts

T	Open the quick-add task form from anywhere on the platform
S	Open global search
# K	Open global search (Mac)
?	Open the support / help request form

Field Mode (Mobile)

If you're working on a phone or tablet, switch to Field Mode via User Menu !' Field Mode. This is a touch-optimized, stripped-down interface designed for on-site work:

- Shows only your assigned tasks and the properties they're linked to
- Large tap targets and minimal navigation for single-hand use
- Task completion, photo upload, and note-taking work seamlessly offline

Global Search

Press S or # K to open the search overlay. You can search across:

- Tasks — by title, description, or assigned person
- Properties — by address, name, or owner
- Contacts — by name, email, or phone
- Notes and documents

Support

Press ? anywhere in the app to open the Support form. Describe the issue and choose an urgency level. Your admin and the Hubify support team receive the request. For urgent issues, select "High" urgency to ensure a faster response.

Best Practices

- Create a task for every job, even small ones — it builds your history and makes invoicing accurate
- Use task templates for repeat work so nothing gets missed and checklists stay consistent
- Keep access codes in the property's Access Control section — never in task notes or chat

- Keep invoices in Draft until you're ready to send — clients cannot see drafts
- Set up your iCal subscription so your Hubify schedule shows in your personal calendar
- Log time entries on the day you work — memory fades and estimates drift
- Run a conflict scan before scheduling a heavy week — catch overlaps before staff do
- Use @mentions in Team Chat to get a specific person's attention without messaging them separately

For additional help, press ? in the app or contact your organization admin.

Hubify · hubify.com
