

# Hubify

Property Management Platform

---

## Demo Walkthrough Guide

Step-by-step tour of the Hubify demo environment  
for sales calls, prospect walkthroughs, and self-guided evaluation

# What's in this Guide

- 1 Demo Credentials & First Login
- 2 Dashboard — Your Opening Slide
- 3 The 10 Demo Properties
- 4 Tasks & Inspections
- 5 Calendar
- 6 Invoices & Billing
- 7 Client Portal
- 8 Dispatch Center
- 9 Team Management
- 10 Talking Points & Objection Responses

**HOW TO USE** This guide is for the person running the demo — not the prospect. Share the "Client Portal" section with prospects who want to self-explore.

# Demo Credentials & First Login

Two accounts — one for staff, one for the client portal

## Staff Admin Account (full platform access)

**URL:** /staff/login !' log in with email + password

**Email:** demo@hubifyhomesonline.com

**Password:** Demo2026!

## Portal Client Account (client-facing portal)

**URL:** /portal/login !' separate login from staff

**Email:** client@demo.hubifyhomesonline.com

**Password:** DemoClient2026!

**TIP** Open both accounts in separate browser tabs — one for the staff view, one for the portal — so you can switch back and forth during the demo without logging in and out.

## Who's on the Demo Team

| Account         | Role & Purpose                                                 |
|-----------------|----------------------------------------------------------------|
| Demo Admin      | Full admin access — the primary account for staff walkthroughs |
| Demo Supervisor | Supervisor role — useful for showing permission differences    |
| Demo Staff 1    | Field staff — assigned to most on-site tasks in the demo       |
| Demo Staff 2    | Field staff — useful for showing task assignment and handoffs  |

## Demo Organization

The demo organization is called "Hubify Demo Portfolio" — a fictional Florida-based property management company with 10 active properties ranging from luxury estates to seasonal snowbird condos. All data is pre-loaded and realistic.

**IMPORTANT** Never enter real client data into the demo environment. The demo can be fully reset from the Super Admin panel at any time.

# Dashboard — Your Opening Slide

The first screen after login; sets the stage for the whole demo

The Dashboard is deliberately pre-loaded with realistic demo data. Every widget shows real numbers from the seeded properties, tasks, and invoices — nothing is mocked.

## What You'll See

| Widget                     | What to Say / Point Out                                                                                 |
|----------------------------|---------------------------------------------------------------------------------------------------------|
| <b>Urgent Tasks</b>        | 2–4 overdue and high-priority tasks across the demo properties — leads naturally into the Tasks section |
| <b>Statistics Overview</b> | Portfolio at a glance: 10 properties, active tasks, pending invoices, team size                         |
| <b>Team Chat</b>           | Pre-seeded messages from demo staff — shows the real-time feed                                          |
| <b>Recent Activity</b>     | Latest platform actions — confirms everything is live data                                              |
| <b>Calendar widget</b>     | Upcoming scheduled visits and events — 5 pre-seeded calendar entries                                    |

## Suggested Opening Script

**"When you log in every morning, this is your command center. You can see immediately if anything is on fire — right now there are two overdue tasks that need attention. Let me click into one of those..."**

**TIP** If the prospect's business is task-heavy, click an overdue task immediately. If they're billing-focused, go straight to Invoices. Always follow their pain point, not a fixed script.

## Dashboard Customization

Point out the gear icon and mention that each widget can be toggled on/off and reordered by drag-and-drop. This is personal — their admin sees a different layout than their field staff.

# The 10 Demo Properties

A diverse portfolio covering the most common property management scenarios

03

Each property is pre-loaded with tasks, access codes, contacts, and inspection data. Use the scenario that best matches the prospect's business.

1

## Beachside Breeze

Home Watch · Naples, FL

**Scenario:** HVAC fault discovered before owner arrival — urgent task open

"This is your bread-and-butter home watch property. Show the task, the photo, and how you notify the owner."

2

## Sunset Key Villa

Luxury Estate · Key West, FL

**Scenario:** Pool heater down + smart-home system offline — two open issues

"Great for luxury clients. Point out the priority flag and the vendor contact already linked for the repair."

3

## Coconut Harbor Retreat

Seasonal / Snowbird · Ft. Myers, FL

**Scenario:** Hurricane prep tasks active — shows seasonal checklist workflow

"Perfect for snowbird managers. Show the recurring inspection schedule and checklist items."

4

## Pelican Point Cottage

Emergency · Captiva, FL

**Scenario:** Active water leak discovered during routine check — critical alert

"High-drama scenario. Click the critical alert badge and show how the team is notified instantly."

5

## Royal Palm Estate

VIP Luxury · Palm Beach, FL

**Scenario:** Owner event preparation in progress — multiple vendors coordinated

"Shows vendor coordination and multi-step task management for high-end clients."

6

## Marina Bay Condo

Rental · Sarasota, FL

**Scenario:** Guest turnover + smart lock reset — shows rental workflow

"Ideal for property managers with rental inventory. Show the recurring turnover task template."

7

## Gulfstream Manor

High Maintenance · Naples, FL

**Scenario:** Irrigation repair overdue + HOA violation open

"Shows the priority escalation and vendor assignment workflow side-by-side."

8

## The Sandpiper

Seasonal Arrival · Sanibel, FL

**Scenario:** Owner arriving early — rush prep tasks auto-created

"Great for showing how Hubify handles schedule changes. Rush tasks were created automatically when arrival moved up."

9

### Lighthouse Point

Storm Damage · Marco Island, FL

**Scenario:** Roof leak from recent storm — insurance documentation tasks active

"Point out the photo attachments on the tasks — field staff photographed the damage on-site."

---

10

### Oceanfront Oasis

Stable Premium · Naples, FL

**Scenario:** All tasks current, no open issues — shows a healthy account

"The "good" comparison. Use this to contrast with the others: "When everything's running smoothly, this is what it looks like.""

---

#### TIP

Navigate to Properties !' select any property !' walk through the tabs: Overview, Tasks, Rooms, Access Control, Inspections. Each tab has live data.

# Tasks & Inspections

The operational heart of the platform

04

There are 20 pre-seeded tasks across the 10 properties: a mix of overdue, in-progress, completed, and scheduled. Three full inspection checklists are active.

## Key Things to Demonstrate

### 1 Show an overdue task

Click the Urgent Tasks widget or filter the task list by "Overdue". Open the Pelican Point water leak — it has a critical priority and a staff note attached.

### 2 Complete a task live

Open any in-progress task and move it to Completed. The date-time stamps automatically. Point out: "This is what your field staff does on their phone when the job is done."

### 3 Show the recurring task setup

Navigate to Oceanfront Oasis !' Tasks and find the recurring weekly check. Show the recurrence schedule — next instance auto-creates on completion.

### 4 Open an inspection checklist

Go to any property !' Inspections tab. Open one of the three pre-seeded inspections. Walk through the checklist items — pass/fail/notes per room.

### 5 Create a task from a template

Click "+ Task", then "Use Template". Show the Hurricane Prep or Move-In/Move-Out templates — pre-filled with checklist, estimated time, and priority.

## Task Statuses in the Demo

|             |                                                |
|-------------|------------------------------------------------|
| Pending     | 8 tasks — scheduled but not yet started        |
| In Progress | 5 tasks — actively being worked on             |
| Completed   | 4 tasks — done; useful for showing history     |
| Overdue     | 3 tasks — intentionally overdue for demo drama |

**TIP** Press T from anywhere to open the quick-task form. Create a task for the property you just visited — it takes 15 seconds. This is the "wow" moment for most prospects.

# Calendar

5 pre-seeded events — conflict detection live

05

The Calendar has 5 demo events already in place. Two of them intentionally overlap on the same property for the same staff member — this triggers the conflict detection system.

## Pre-Seeded Events

| Event                   | What to Point Out                                                         |
|-------------------------|---------------------------------------------------------------------------|
| Owner Arrival Prep      | Sandpiper — linked to arrival rush tasks; shows property-event connection |
| Royal Palm Owner Event  | Multi-vendor coordination event — shows attendee management               |
| Pool Maintenance Visit  | Sunset Key — recurring monthly; shows iCal subscription integration       |
| Pelican Plumber On-site | Overlap event — intentional conflict with another staff assignment        |
| Monthly Review Meeting  | Team-internal; shows non-property events and staff scheduling             |

## Conflict Detection

When you navigate to the Calendar, click on the Pelican Plumber event and then the overlapping assignment. The conflict badge appears immediately. Say:

**"Hubify checks for double-bookings automatically. Your supervisors see conflicts flagged in real time — no more discovering a problem when the client calls."**

## iCal Sync Demo

### 1 Open User Menu !' Calendar

The iCal feed URL is shown in the Subscribe section.

### 2 Paste into Google Calendar

"Add by URL" imports all Hubify events into your personal calendar — read-only, synced automatically.

**TIP** If the prospect uses a shared team calendar (Outlook, Google), lead with the iCal sync — it's the fastest way to show Hubify fits into their existing workflow.

# Invoices & Billing

5 invoices in every status + a consolidated batch

06

The demo has invoices across every status, including a consolidated batch invoice — the feature prospects most frequently cite as a must-have.

## Demo Invoices at a Glance

| Invoice #        | Status / Amount / Property                                                |
|------------------|---------------------------------------------------------------------------|
| DEMO-2026-001    | Draft — \$1,950 · Beachside Breeze · Pre-arrival HVAC inspection          |
| DEMO-2026-002    | Sent — \$3,800 · Coconut Harbor · Hurricane prep + generator service      |
| DEMO-2026-003    | Overdue — \$2,200 · Lighthouse Point · Emergency water-intrusion response |
| DEMO-2026-004    | Sent — \$2,460 · Royal Palm · May owner-event coordination                |
| DEMO-2026-005    | Paid — \$2,850 · Marina Bay · April turnover + inspection                 |
| DEMO-2026-CONSOL | Draft (Batch) — \$9,850 · 3 properties · Consolidated monthly portfolio   |

## What to Demo

### 1 Show the batch invoice

Go to Admin !' Billing !' Invoices. Open DEMO-2026-CONSOL. Scroll through the consolidated line items — all three properties, single PDF for the client.

### 2 Change a status

Open DEMO-2026-001 (Draft). Change it to Sent. Explain: "The moment you change this status, it appears in the client's portal. Until then, they can't see it — no accidental sends."

### 3 Show the overdue invoice

Open DEMO-2026-003. Point out the overdue badge and explain automated reminder emails — the system can be set to nudge clients automatically on day 3, 7, and 14.

### 4 Stripe payment (if configured)

If Stripe is connected, open the paid invoice DEMO-2026-005. Show the payment method, transaction date, and receipt URL — all captured automatically via webhook.

**KEY POINT** Drafts are never visible in the client portal — regardless of any setting. Clients only ever see Sent or Paid invoices. This is a hard rule, not a toggle.

# Client Portal

A private window into their portfolio — no staff access required

The portal is a completely separate interface. Log in as the demo client to show what your customers actually see — without exposing internal operations or other clients' data.

## Logging into the Portal

**URL:** /portal/login

**Email:** client@demo.hubifyhomesonline.com

**Password:** DemoClient2026!

## What the Demo Client Sees

| Portal Tab           | What the Client Sees                                                                 |
|----------------------|--------------------------------------------------------------------------------------|
| <b>My Properties</b> | Beachside Breeze + Marina Bay Condo — the 2 properties linked to this portal account |
| <b>My Tasks</b>      | Active tasks on those 2 properties — field notes are stripped from client view       |
| <b>My Invoices</b>   | Only Sent and Paid invoices — DEMO-2026-004 and -005 appear; drafts are hidden       |
| <b>Documents</b>     | Any files explicitly shared by staff — shows secure document delivery                |

## Suggested Portal Script

"Now I'm going to log in as one of your clients. This is the exact experience they get — their properties, their tasks, their invoices. Nothing else. No other client's data. No internal notes."

"When I go to Invoices, they can see what's been sent, download a PDF, and — if you've connected Stripe — pay directly from this screen. You get notified the moment they do."

**TIP** Open the portal and staff tabs side by side (two browser windows) during the demo. Update a task in the staff view, then refresh the portal — they'll see it update in real time.

## Password Reset (for prospects)

### 1 Direct them to /portal/login

Click "Forgot password?" and follow the reset flow.

### 2 They set their own password

The portal uses email + password login, separate from Replit. Prospects can create their own account via invitation.

# Dispatch Center

Build daily itineraries and brief field staff before they leave

08

The Dispatch Center is where supervisors plan the day's route for field staff — assigning which properties to visit, in what order, with estimated travel and stop durations.

## How to Demo It

### 1 Navigate to Dispatch

Click the Dispatch item in the main navigation (Admins and Supervisors only).

### 2 Select or create an itinerary

Today's itinerary appears if one exists. Click "New Itinerary" to create one from scratch, or select an existing itinerary from the left panel.

### 3 Add stops

Click "+ Add Stop" and select a property. Set an estimated duration. Drag stops to reorder.

### 4 Open the Route Brief

Click the "Route Brief" button in the itinerary header. A side panel opens with three tabs.

### 5 Walk through the three tabs

Access Codes (tap the eye icon to reveal), Alerts & Instructions (severity-coded), Supplies (what to bring vs. what to order).

### 6 Publish the itinerary

Click Publish. The itinerary pushes to the assigned staff member's calendar and phone.

## Route Brief Tabs

| Tab                   | What to Say / Point Out                                                                                                                                                    |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Access Codes          | All property codes for the route — door, gate, alarm, Wi-Fi. Values are blurred by default; tap the eye to reveal. Prevents codes being visible on screen during the trip. |
| Alerts & Instructions | Real-time property alerts (critical, warning, info) + client notes. Critical alerts shown first. Say: "Before your team walks out the door, they know about the..."        |
| Supplies              | "Bring from stock" vs "Need to purchase" — items due for replacement within 30 days. Checkboxes let staff tick off what they've loaded in the van.                         |

**TIP** "This replaces the paper clipboard, the group text, and the spreadsheet your dispatcher emailed this morning — all in one screen, always current."

# Team Management

Roles, assignments, and staff coordination

Navigate to the Team section to show staff management. The demo has 4 team members: 1 admin, 1 supervisor, and 2 staff — representing a typical small-to-mid size operation.

## What to Show

- Role hierarchy — Admin !' Supervisor !' Staff and what each role can and cannot do
- Inviting a new team member — click "Invite Team Member", enter an email, assign a role. They receive the invitation automatically.
- Supervisor relationships — click on Demo Staff 1 to see their assigned supervisor and how that affects task assignment workflow
- Out-of-office — show how to flag a staff member as unavailable and how it blocks new task assignments for that period
- Broadcast messaging — show how to email an entire team at once from the Messages section

## Role Permissions at a Glance

| Role       | What They Can Access                                                                               |
|------------|----------------------------------------------------------------------------------------------------|
| Admin      | Everything: billing, settings, team management, all data, super-admin actions                      |
| Supervisor | All operational data; cannot change org settings or billing; can manage tasks and team assignments |
| Staff      | Own tasks and assigned properties only; no billing, no team management, no other clients' data     |

**FEATURE FLAG** Time Tracking is controlled by a feature flag. If the prospect needs billable time logging, confirm it's enabled in Settings !' Feature Flags before the demo.

# Talking Points & Objection Responses

Common questions and how to answer them

# 10

---

## **"We already use spreadsheets / a different tool."**

"Hubify isn't just a better spreadsheet — it connects the job (task), the place (property), the person (client), and the money (invoice) in one record. When you complete a task, it's already attached to the right property and ready to invoice. No retyping, no cross-referencing."

## **"Our clients don't want a portal — they just want to call us."**

"The portal doesn't replace the phone — it answers the questions that don't need a phone. 'Did the inspector go today?' 'Where's my invoice?' 'Did that leak get fixed?' Clients check the portal instead of calling. You get fewer interruptions, they get instant answers."

## **"What about our existing property data?"**

"We have a CSV import tool with AI-assisted field mapping — you can import your existing properties, contacts, and tasks. Most teams are fully migrated in a day. We also offer a white-glove onboarding service for larger portfolios."

## **"Is my data secure?"**

"Hubify is multi-tenant — each organization is completely isolated. Your clients' data is encrypted at rest and in transit. Access codes are stored encrypted. We're built on enterprise-grade infrastructure with SOC 2-aligned practices."

## **"What's the pricing?"**

"Pricing is based on the number of active properties in your portfolio. I can pull up the current plan options and we can walk through which tier fits your team. Would you like to do that now, or finish the demo first?"

---

## **Demo Reset**

If any demo data gets changed during the walkthrough and you want to restore the original state, go to Super Admin !' Demo tab !' Full Reset. This wipes and reseeds everything in about 30 seconds. The demo URL and admin login are never affected.

---

Questions during the demo? Press ? inside Hubify to open the support form, or email your Hubify account manager directly.

**Hubify · [hubifyhomesonline.com](https://hubifyhomesonline.com)**
